

BACHELOR OF SCIENCE IN PUBLIC HEALTH

Gain knowledge, skills, and tools to solve population health problems.

About the Major

The major in public health is a College of Health Professions Bachelor of Science degree offering that develops students' understanding of the underlying science of human health and disease across the life course. Students will learn fundamental concepts of program implementation, planning, assessment, and evaluation to address population health issues.

Students will also gain understanding of legal, ethical, economic, and regulatory dimensions of health care and public health policy.

The public health major will graduate with a **Council on Education for Public Health (CePH)** accredited degree that may be used to seek entry-level employment in

public health, to further education at the graduate level, to seek public health related certifications, or to continue education in the health sciences. The Bachelor of Science in Public Health (BSPH) degree is also very compatible with multiple health science degrees, including Medicine, Physical Therapy, and Physician Assistant.

About the Minor

A minor in public health consists of 15 hours of public health courses, 6 hours of which must be from upper division courses offered.

Outreach and Engaged Learning

Public health majors complete 30 community service hours related to public health. Students may select between an internship or research project as their capstone experience. Students who select an internship in a public health setting will be under the supervision of a public health professional and the internship director. Students who elect to complete a research project will do so under the supervision of public health faculty and its partners. A portfolio demonstrating competency for entry-level employment is also required for completion of the capstone experience.

Undergraduate Research Opportunities

Students are encouraged to engage with faculty and departmental partners in research upon completing essential courses for topics related to public health.

BACHELOR OF SCIENCE IN PUBLIC HEALTH

In the Classroom

Students will gain knowledge and develop skills from assignments, readings, class discussions, guest speakers, field trips, case studies, and other activities. Certification in various public health topical areas will be offered to provide students to develop competency in public health. A mix of learning, experiences, and knowledge enhancement will help graduates be marketable in a competitive environment.

Students are encouraged to join the Mercer Public Health Association (MPHA). Students are also encouraged to participate in annual local, state, and national public health events with the following associations:

Students are encouraged to join the Mercer Public Health Association (MPHA). Students are also encouraged to participate in annual local, state, and national public health events with the following associations:

- Georgia Public Health Association (GPHA)
- Georgia Rural Health Association (GRHA)
- American Public Health Association (APHA)
